

Waterlase Dentistry

Waterlase Dentistry is one of the most advanced dental treatments available today. Waterlase uses a patented technology that combines focused light energy with a stream of water for a highly precise, exceptionally gentle dental experience.

Waterlase allows your dentist to perform a wide range of procedures with benefits including:

- ✦ Gentler treatment with faster healing
- ✦ Replaces the use of dental drill
- ✦ Less anesthetic for most procedures
- ✦ Makes dental care a more relaxing experience for you and your child

You deserve better dentistry.

“
I just love coming into the dentist and having the option of laser dentistry for my two kids. The whole experience is just so much better — for all of us.

”
Susan, Florida

Laser Dentistry. By BIOLASE

BIOLASE
LEADER IN DENTAL LASERS™

Kid Preferred... Mom Approved!

The Waterlase™ laser uses a combination of laser energy and water to perform dental procedures that otherwise are performed with a dental drill or scalpel. This gentler method of treatment can help eliminate fear and anxieties associated with dental visits and help foster a healthier life-long mindset about oral care.

Gentle & Precise

Waterlase Dentistry™ is a gentler and more precise treatment option for your child's dental needs. The American Academy of Pediatric Dentistry recognizes the use of lasers in dental procedures for infants, children, adolescents, and people with special health care needs¹.

Preferred Treatment for Tooth Decay

Waterlase laser energy quickly removes cavities with pinpoint accuracy — without the heat, vibration, and shrill sound of the drill.

For the majority of patients, no anesthesia is necessary. Fewer shots mean less anxiety and stress for both you and your child. Little to no numbness after the procedure leads to less accidental cheek biting, and fewer adverse side effects associated with anesthesia.

*No more loud, scary drill.
The Waterlase dental
laser makes a sound like
popping popcorn.*

Less Trauma and Faster Healing

Patients treated with laser energy recover more quickly². The Waterlase stops bleeding before it starts, making procedures less painful and traumatic. Healing can occur more rapidly with less discomfort for your child and a reduced need for post-operative medication.
